

S740 Alert Unit at Mutual Aid Organization in Miyazaki Prefecture

Meisei Electric's QCAST® Series in Full use at Mutual Aid Organization in Miyazaki Prefecture !

Meisei Electric has provided QCAST® S740 Alert Unit with Miyazaki Mutual Aid Organization through NTT West. The S740, with which we have provided is a system to be broadcasted widely at their HQ through the broadcasting equipment installed on the 3F. For the personal safety and the disposal of fire it will enable the visitors and the staffs to act in the manner calm by noticing the arrival of the earthquake in advance.

Regrettably it is badly unknown when the earthquake takes place. Meisei Electric's QCAST® Series are in full use at the offices or factories as a instrument to provide the necessary information to the staffs making the best for personal life stability and improvement.

An Instant of a Star to be Swallowed in a Massive Black Hole (source: JAXA)

“MAXI” First Observation of a Massive Black Hole Swallowed a Star !

The Monitor of All Sky X-Ray Image (“MAXI”), which is on Japanese Experiment Module (“KIBO”) in coordination with the gamma-ray burst satellite Swift (USA), has observed the instant of a massive black hole swallowed a star for the first time in the world, located in the center of a galaxy 3.9 billion light year away. The “MAXI” is called as “Space Astronomical Observatory”, for which we were very deeply involved in both development and manufacturing. In July 2009 it was installed on the overboard experimental platform of the “KIBO” and since August 2009 it has continued to monitor the whole sky x-ray. The result was disclosed on the newspapers issued on the 25th August, 2011. For the details please see: <http://www.isas.jaxa.jp/e/forefront/2011/kawai/index.shtml>

Disaster Prevention Training at the House of Councilors !

The disaster prevention training was held at the House of Councilors of the National Diet in Tokyo on the Disaster Prevention Day of the 1st September, 2011.

At the training Meisei Electric's emergency earthquake alert system QCAST® was operated and broadcasted widely to draw the attention among the members of the Diet and the staffs working at the relative buildings.

Meisei Electric's QCAST® series have commenced the operation at the House of the Councilors since 2008 and they are playing an important role for the measures of the disaster prevention at the National Diet in the center of the politics of Japan.

FROM UNDERWATER TO OUTERSPACE

Meisei Electric aims at the "World's Total Solutions Provider" covering from underwater to outerspace under the theme of "Contributing towards Human and Social Rich Environment" by the full use of advanced technology.
